# Prologue: Are you optimistic or pessimistic about the future?

# Are we on track?

---

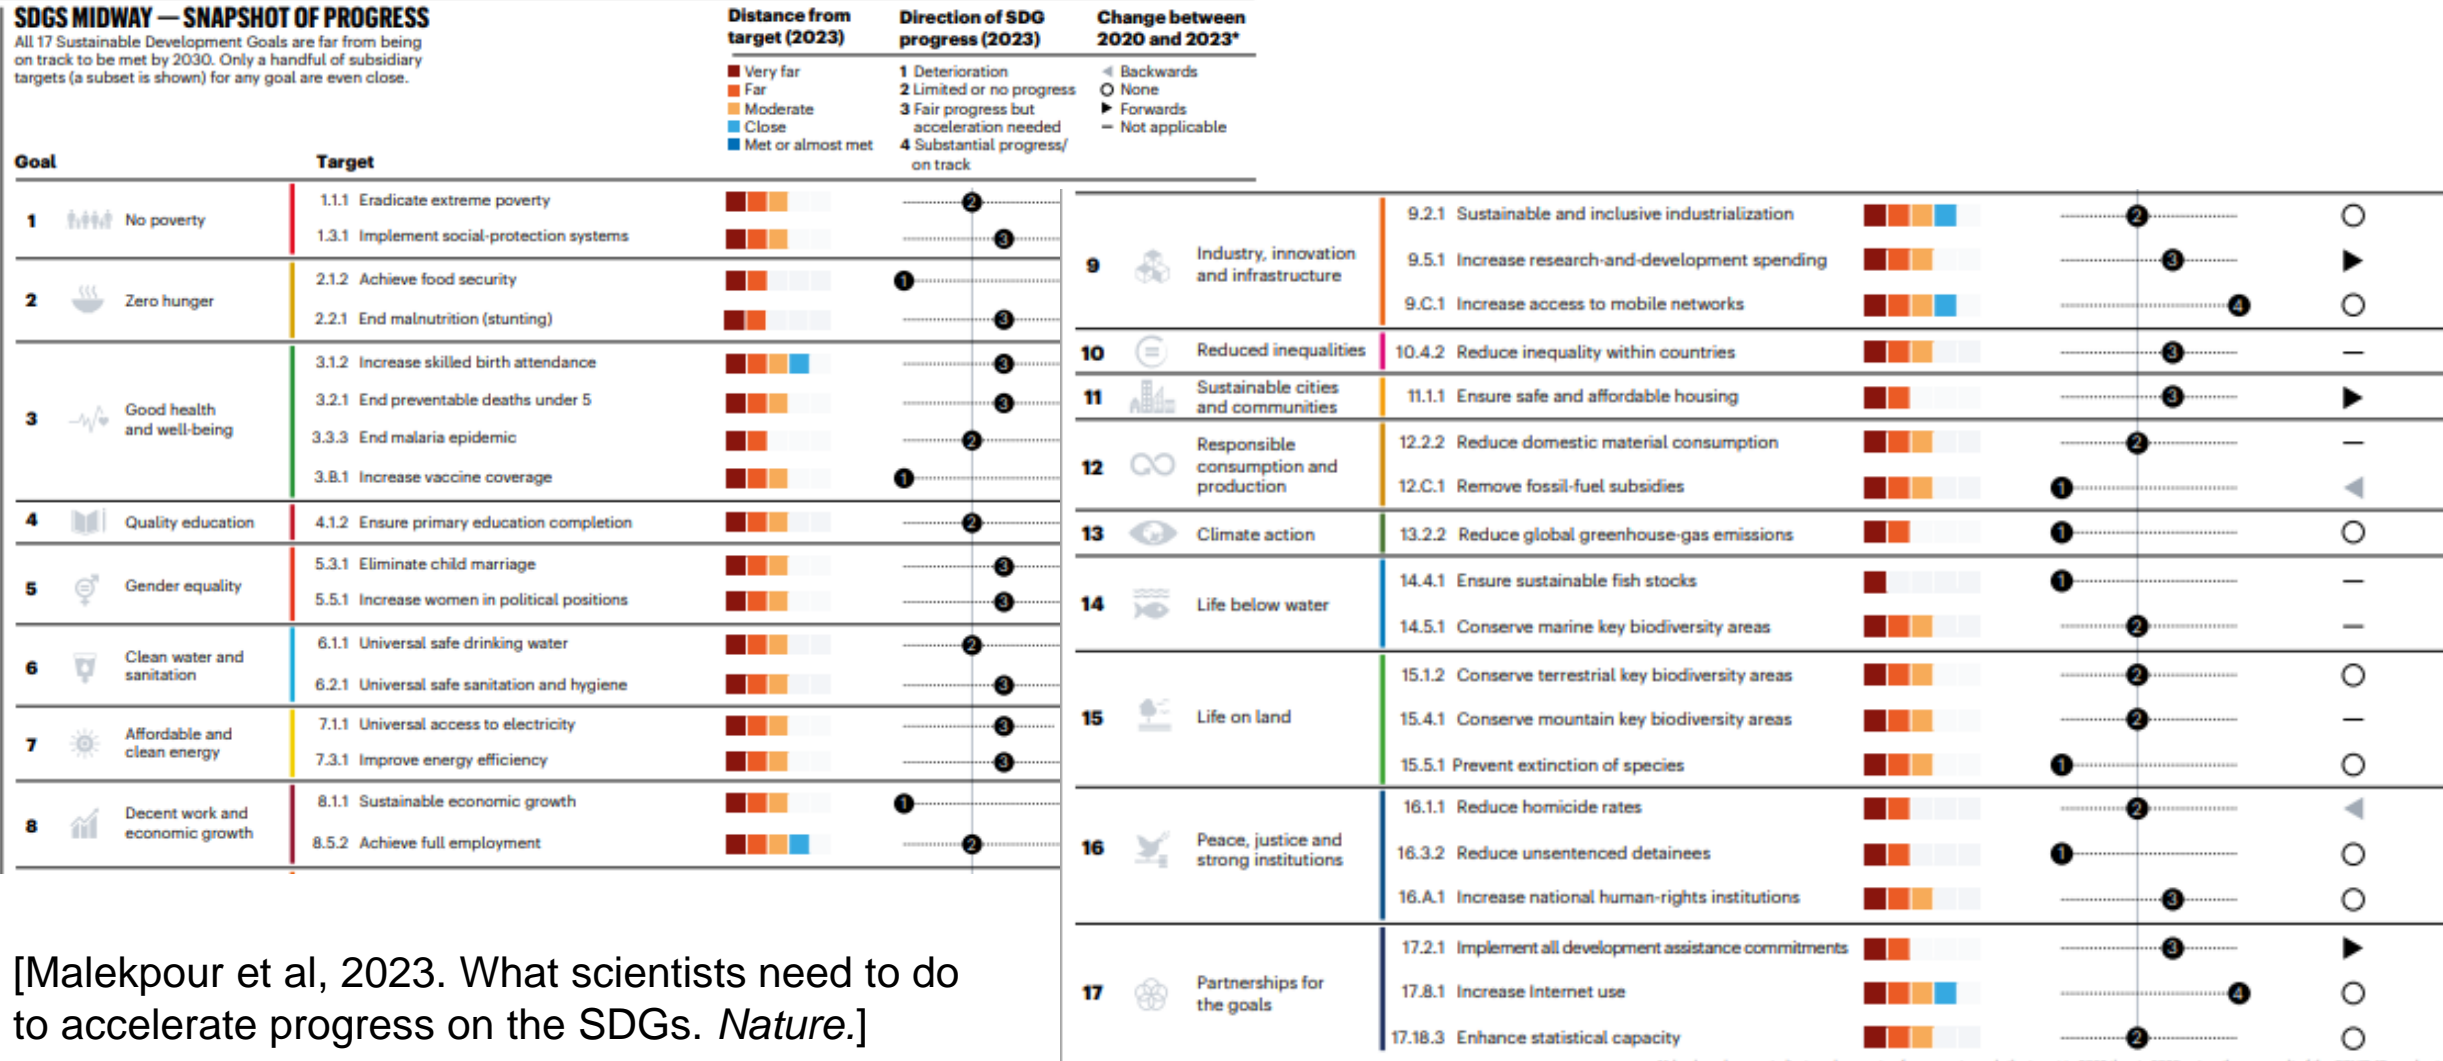

To meet the United Nations' agreed sustainable development goals by 2030?

<b>Strongly agree</b>		<b>Neutral</b>		<b>Strongly disagree</b>
5	4	3	2	1

# Worryingly, we are not on track

## SDGS MIDWAY — SNAPSHOT OF PROGRESS

All 17 Sustainable Development Goals are far from being on track to be met by 2030. Only a handful of subsidiary targets (a subset is shown) for any goal are even close.

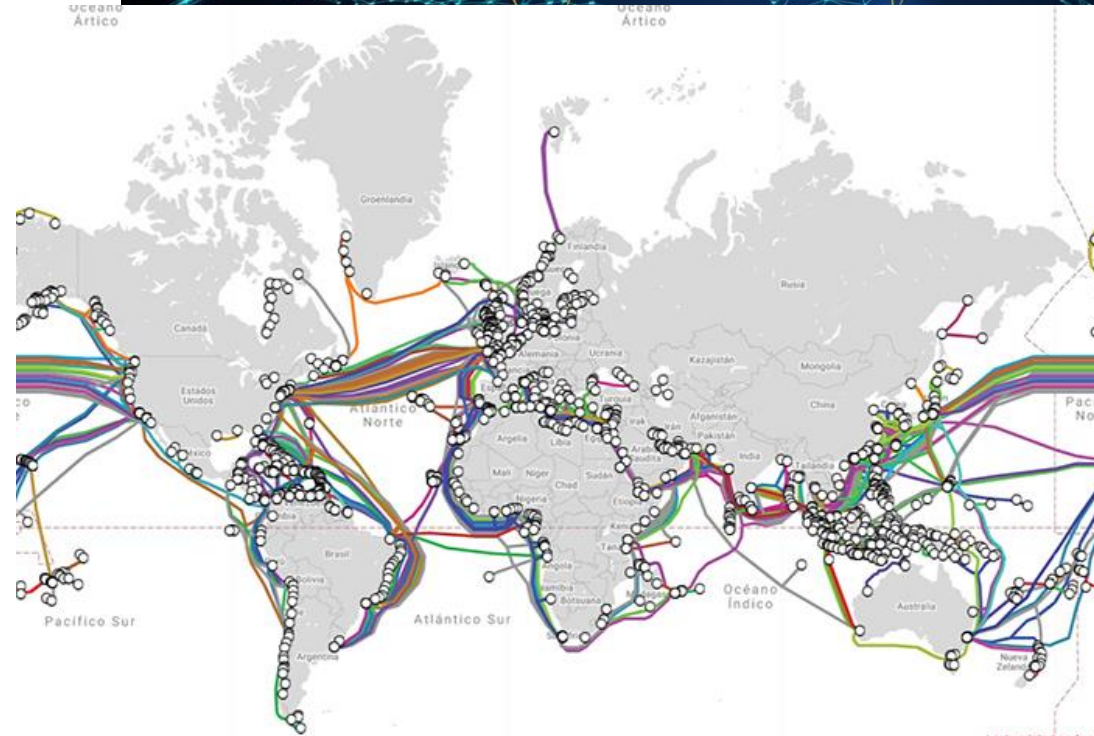

[Malekpour et al, 2023. What scientists need to do to accelerate progress on the SDGs. *Nature*.]

\*A backwards arrow indicates a lower rate of progress towards the target in 2023 than in 2020, primarily as a result of the COVID-19 pandemic.

# Only two are on track

CAN YOU GUESS WHICH THEY ARE?

# Part 1: Dealing with the future:

## Examples

# Example 1:

---

# Climate change

# Tackling climate change: the pivotal role of clinicians

## HEALTHCARE'S BI-DIRECTIONAL PROBLEM

Healthcare is a major emitter (4%-8.5% of national carbon burden)

Healthcare is on the front lines to deal with climate change (especially Emergency Departments and Primary Care settings)

# Tackling climate change: the pivotal role of clinicians; BMJ

## PRACTICE

## ACTIONS FOR SUSTAINABLE HEALTHCARE

### Tackling climate change: the pivotal role of clinicians

Jeffrey Braithwaite,<sup>1</sup> Anuradha Pichumani,<sup>2</sup> Philip Crowley<sup>3</sup>

#### What you need to know

- Healthcare systems are major emitters of greenhouse gases, but also have to manage increased demand for care as a consequence of the climate crisis
- Key sources of greenhouse gas emissions include energy generated from fossil fuels, running of services, and healthcare supply chains (transport, pharmaceuticals, equipment, and food)
- Reducing greenhouse gas emissions can be achieved through legislation and policy, effective leadership and management, and above all, promoting sustainable practice in front line care

#### Sources and selection criteria

We searched Medline for articles, and the internet for publicly available reports of policy actions by healthcare services and institutions seeking to limit their greenhouse gas emissions. We also drew on our own expertise.

Every healthcare professional, manager, policymaker, politician, and patient has a role to play in securing net zero carbon emissions in healthcare, and front line clinicians can make a profound difference. This article offers an overview of the carbon footprint of healthcare, as a preview to the BMJ's Actions for Sustainable Healthcare series, which will highlight practical actions clinicians can take to support reaching the net zero goal. Key terms used in this article are defined in [box 1](#).

#### Box 1: Definitions of key terms<sup>1,8</sup>

- Adaptation: Adjusting to and coping with present or future climate change
- Carbon dioxide equivalents (CO<sub>2</sub>eq): A metric derived from converting different types of greenhouse gases (eg, carbon dioxide, methane, nitrous oxide) to one standardised measure

- Life cycle assessment: A method of estimating the environmental impact generated across the life of a product, process, or service
- Low value care: Clinical treatment or services that provide minimal or no benefit to patients
- Mitigation: Measures to reduce greenhouse gas emissions from the atmosphere
- Net zero: When amounts of greenhouse gases produced and removed from the atmosphere are in balance
- Supply chain: The production flow of products and services to and from a provider—in the case of healthcare, for example, water, consumables, medical equipment, drugs, and food
- Scopes 1, 2, and 3:
  - Scope 1: emissions generated from directly running care services and facilities
  - Scope 2: emissions created through buying and consuming energy
  - Scope 3: emissions caused by the goods, materials and equipment healthcare facilities use and dispose of, including transport and services provided

#### How large is the carbon footprint of healthcare?

Based on modelling of economic activity and carbon emissions projections, greenhouse gas emissions from healthcare (usually measured as carbon dioxide equivalents, or CO<sub>2</sub>eq) account for between 3% and 8.5% of a country's total emissions, depending on the health system, with the average at 4-5%.<sup>4,9</sup> On a global scale, this is the same as the total emissions of the African continent (almost 1.5 billion people across 54 countries).<sup>9,10</sup> Greenhouse gas emissions from healthcare vary depending on the wealth and relative carbon intensity of the country and its electricity grid.<sup>10</sup>

## Key sources of emissions:

- energy generated from fossil fuels
- running of services
- healthcare supply chains (i.e. transport, pharmaceuticals, equipment and food)

## Best targeted reductions via:

- legislation and policy
- effective leadership and management
- promoting sustainable practice on the front lines of care
- address the supply chains

# How large is the carbon footprint of healthcare?

# The Scopes framework

**Scope 3** All other supply chain emissions **82%**

Including:

- Water and waste
- Energy
- Transport and construction
- Medical devices and medical supplies
- Pharmaceuticals and chemicals
- Other manufacturing
- Information and computer technology, equipment and services
- Plastics, rubber, textiles, and paper
- Finance, insurance, administration, and public health testing and research
- Food
- Others

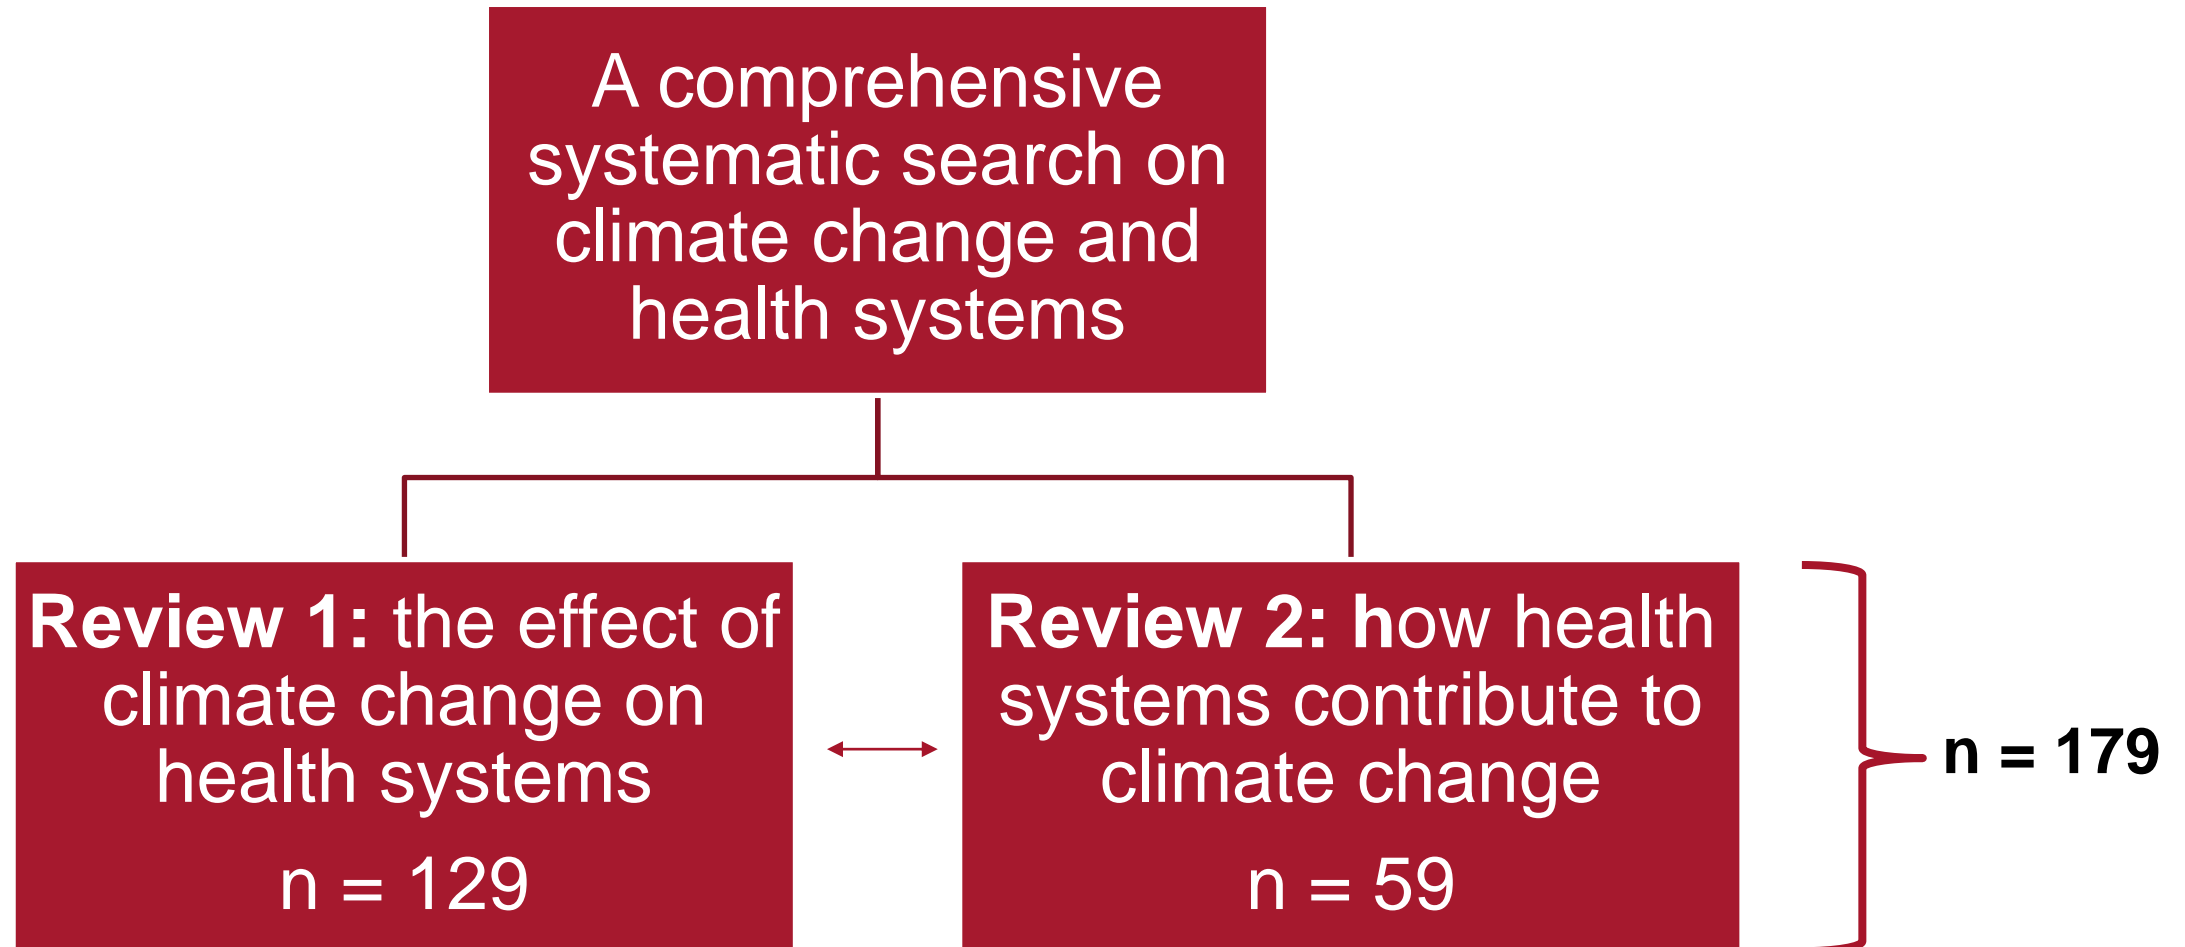

**Scope 1** Direct emissions from healthcare facilities **7%**

**Scope 2** Emissions from direct purchases of energy **11%**

# From one systematic review to two

2022

# Review 1

**How will health systems cope with the effects of climate change? A systematic review of their capacities and preparedness**

# Topics

## SEVEN TOPICS THAT EMERGED FROM THE LITERATURE

---

1. Service interruption as a result of climate hazards

2. Surge capacity and increased burden on the system

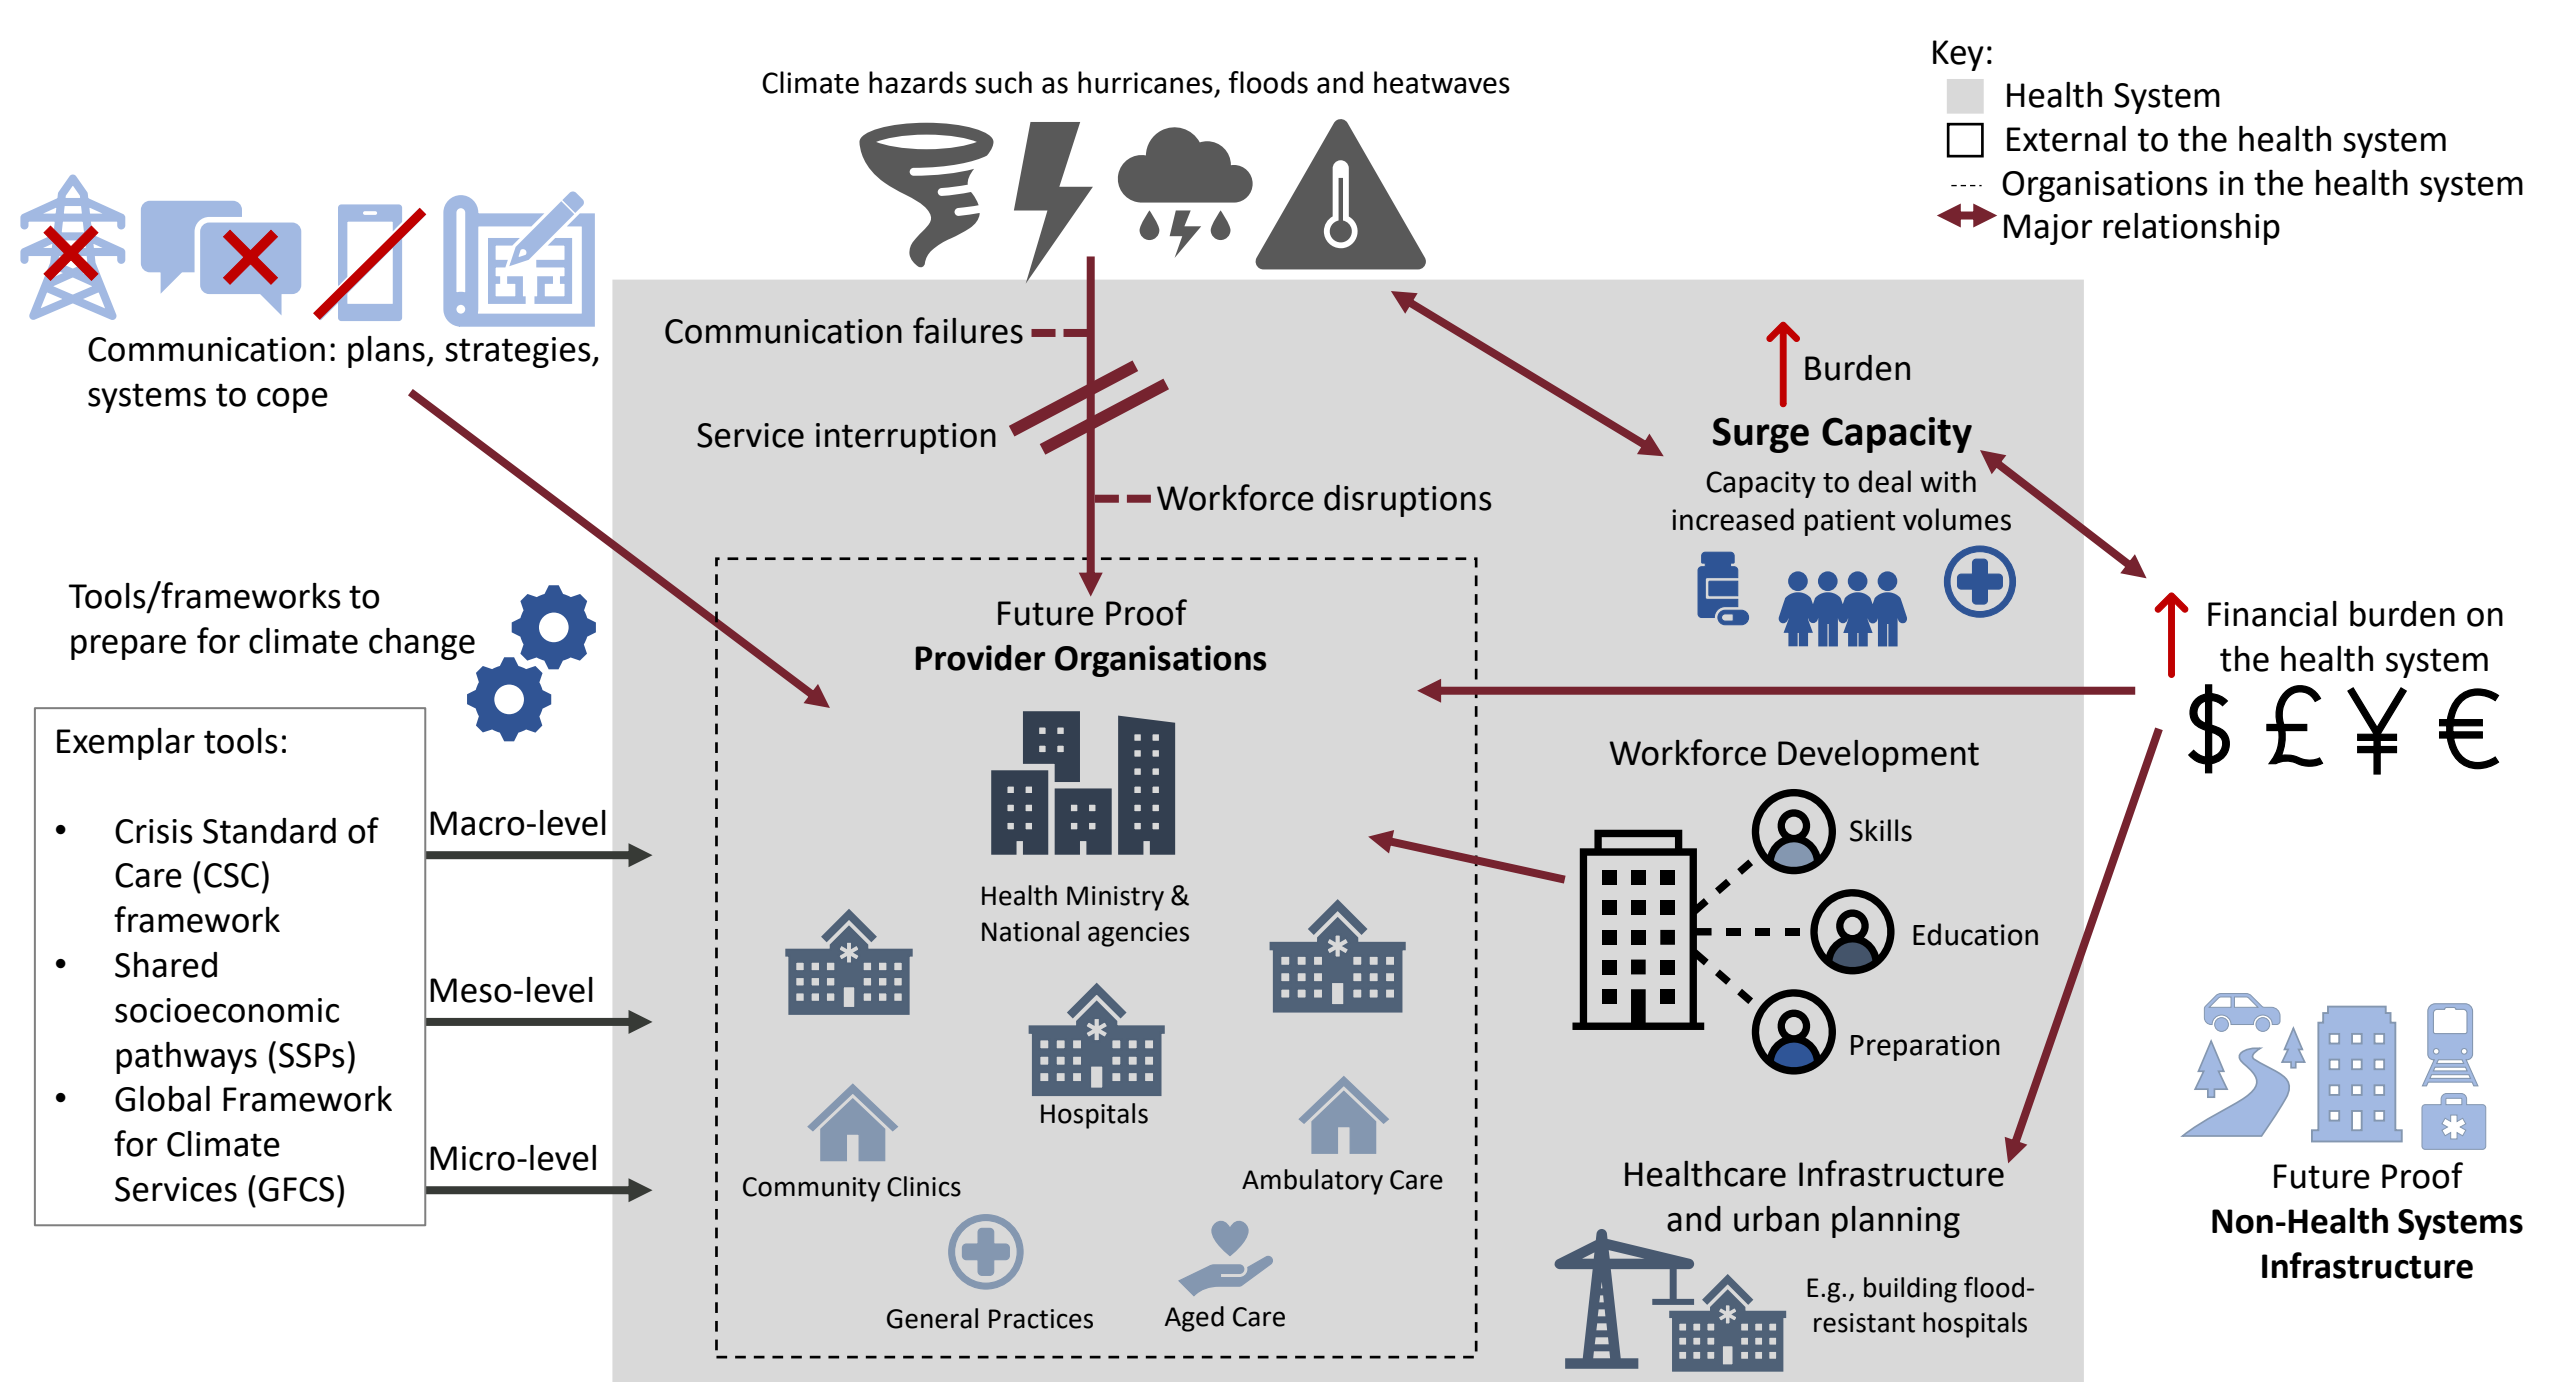

3. Tools and frameworks for preparing for, and dealing with, climate change

4. Infrastructure and urban planning in the context of healthcare

5. Communication: failures, plans, systems to cope

6. Workforce: skills, education, preparation

7. Financial cost of climate change-related events on the health system

# Review 2

**Ways to reduce healthcare's  
impact on climate change:  
A systematic review**

# Themes

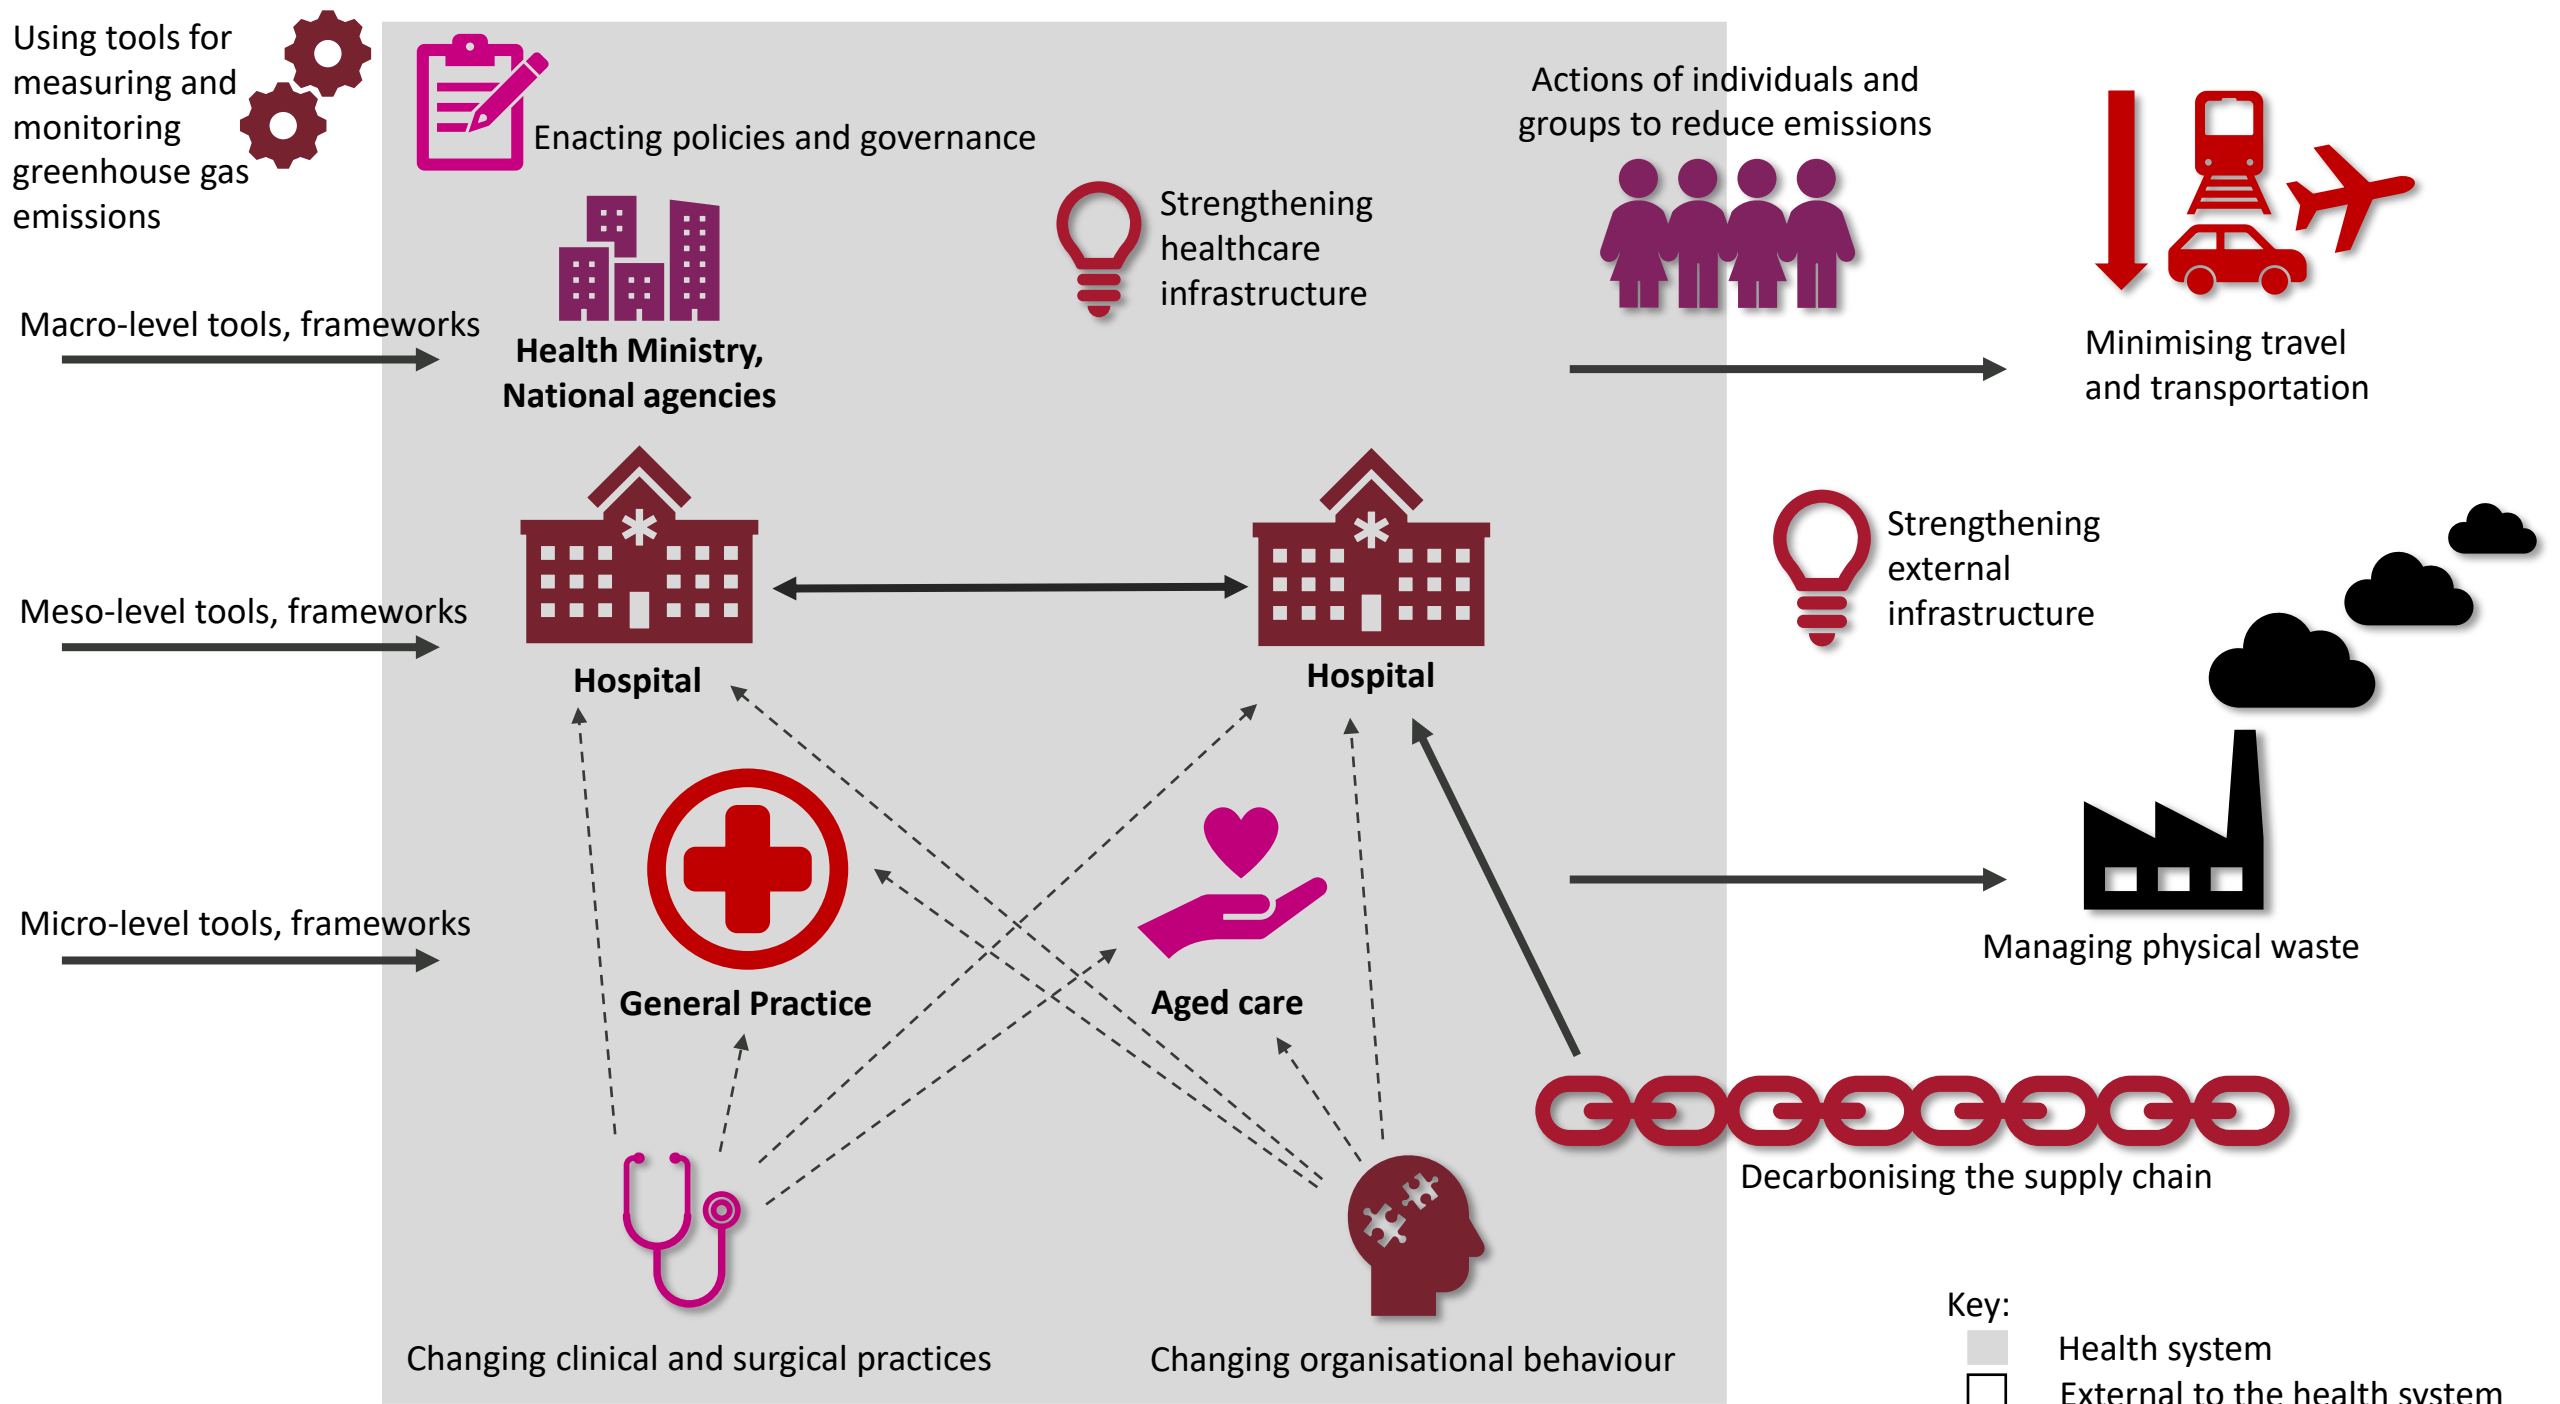

NINE THEMES CATEGORISED INTO TWO TYPES OF STRATEGIES

## Overarching strategies

- 1. Enacting policies and governance
- 2. Using tools for measuring and monitoring GHG emissions
- 3. Changing organisational behaviour
- 4. Actions of individuals and groups

## Decarbonisation strategies

- 5. Decarbonising the supply chain
- 6. Strengthening infrastructure
- 7. Changing clinical and surgical practices
- 8. Managing physical waste
- 9. Minimising travel and transportation

Using tools for measuring and monitoring greenhouse gas emissions

Enacting policies and governance

Health Ministry, National agencies

Strengthening healthcare infrastructure

Actions of individuals and groups to reduce emissions

Minimising travel and transportation

Macro-level tools, frameworks

Meso-level tools, frameworks

Micro-level tools, frameworks

Hospital

Hospital

General Practice

Aged care

Changing clinical and surgical practices

Changing organisational behaviour

Strengthening external infrastructure

Managing physical waste

Decarbonising the supply chain

Key:

Health system

External to the health system

Received 24 June 2020; Editorial Decision 3 September 2020; Revised 30 August 2020; Accepted 8 September 2020

## Abstract

**Background:** The health, social and economic consequences of the severe acute respiratory syndrome coronavirus (SARS-CoV-2, henceforth COVID-19) pandemic have loomed large as every national government made decisions about how to respond. The 40 Health Systems, COVID-19 (40HS, C-19) study aimed to investigate relationships between governments' capacity to respond (CTR), their response stringency, scope of COVID-19 testing and COVID-19 outcomes.

# The 40HS, C-19 Study

---

- 40 health systems
- 36 OECD countries
- Plus the Republic of China (Taiwan), Singapore, Malaysia and Iran

# The 40HS, C-19 Study

---

- Examined three parameters:
  - Capacity of the system and the government to respond
  - Early stringency, e.g., masks, lockdowns, shelter in place
  - Testing, broadly across society, or narrowly to specific groups

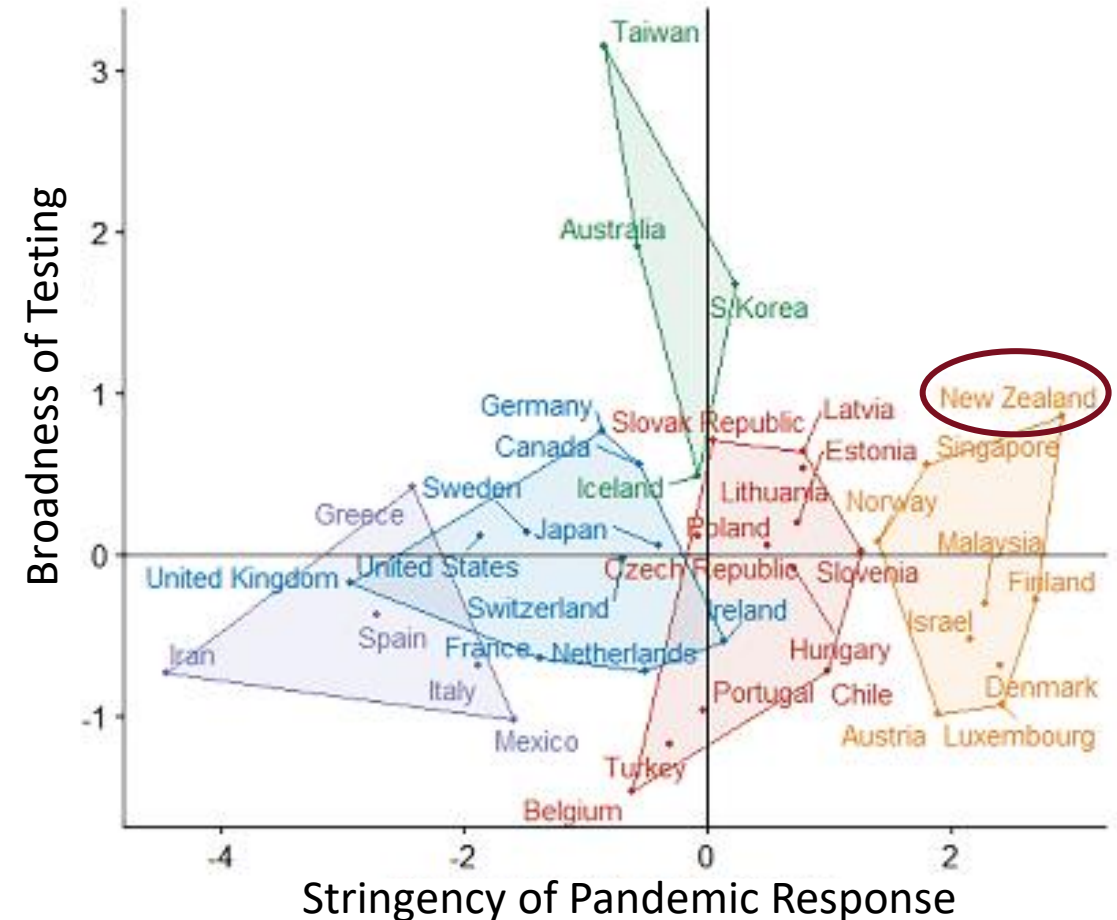

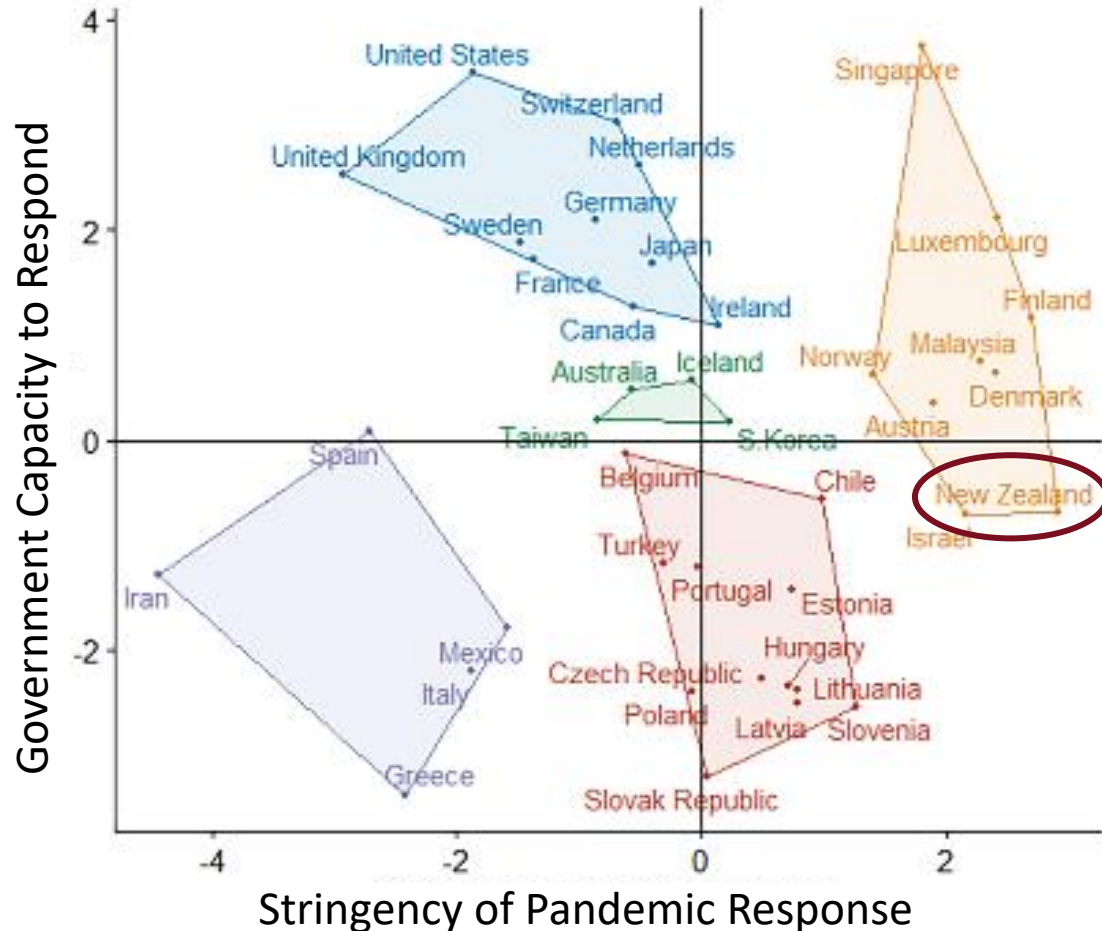

**Which of these three is  
most important?**

# Results

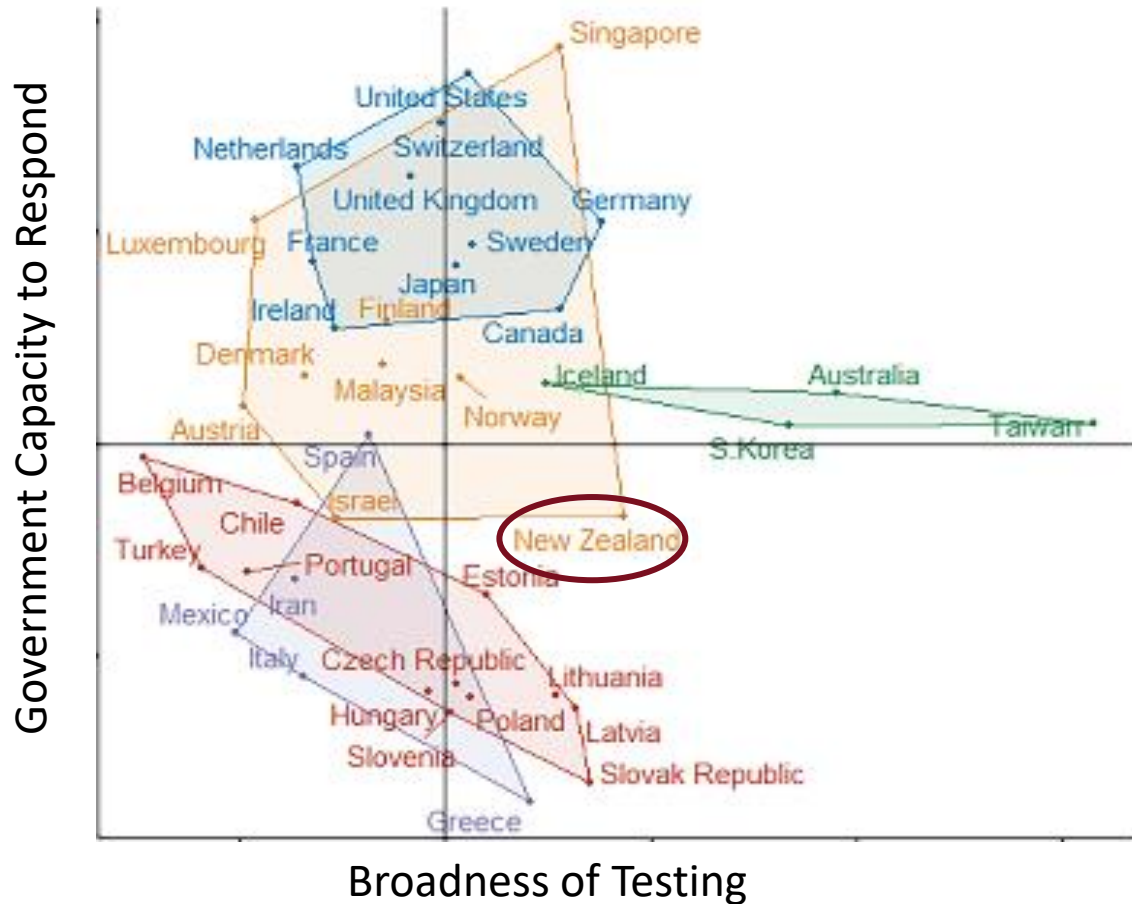

---

- Intrinsic national capacities to respond (CTR) and early stringency measures to deal with a pandemic are insufficient
- Extended stringency measures, important in the short-term, were not thought to be economically sustainable
- In this study, broad-based testing is key to managing COVID-19. **Why?**

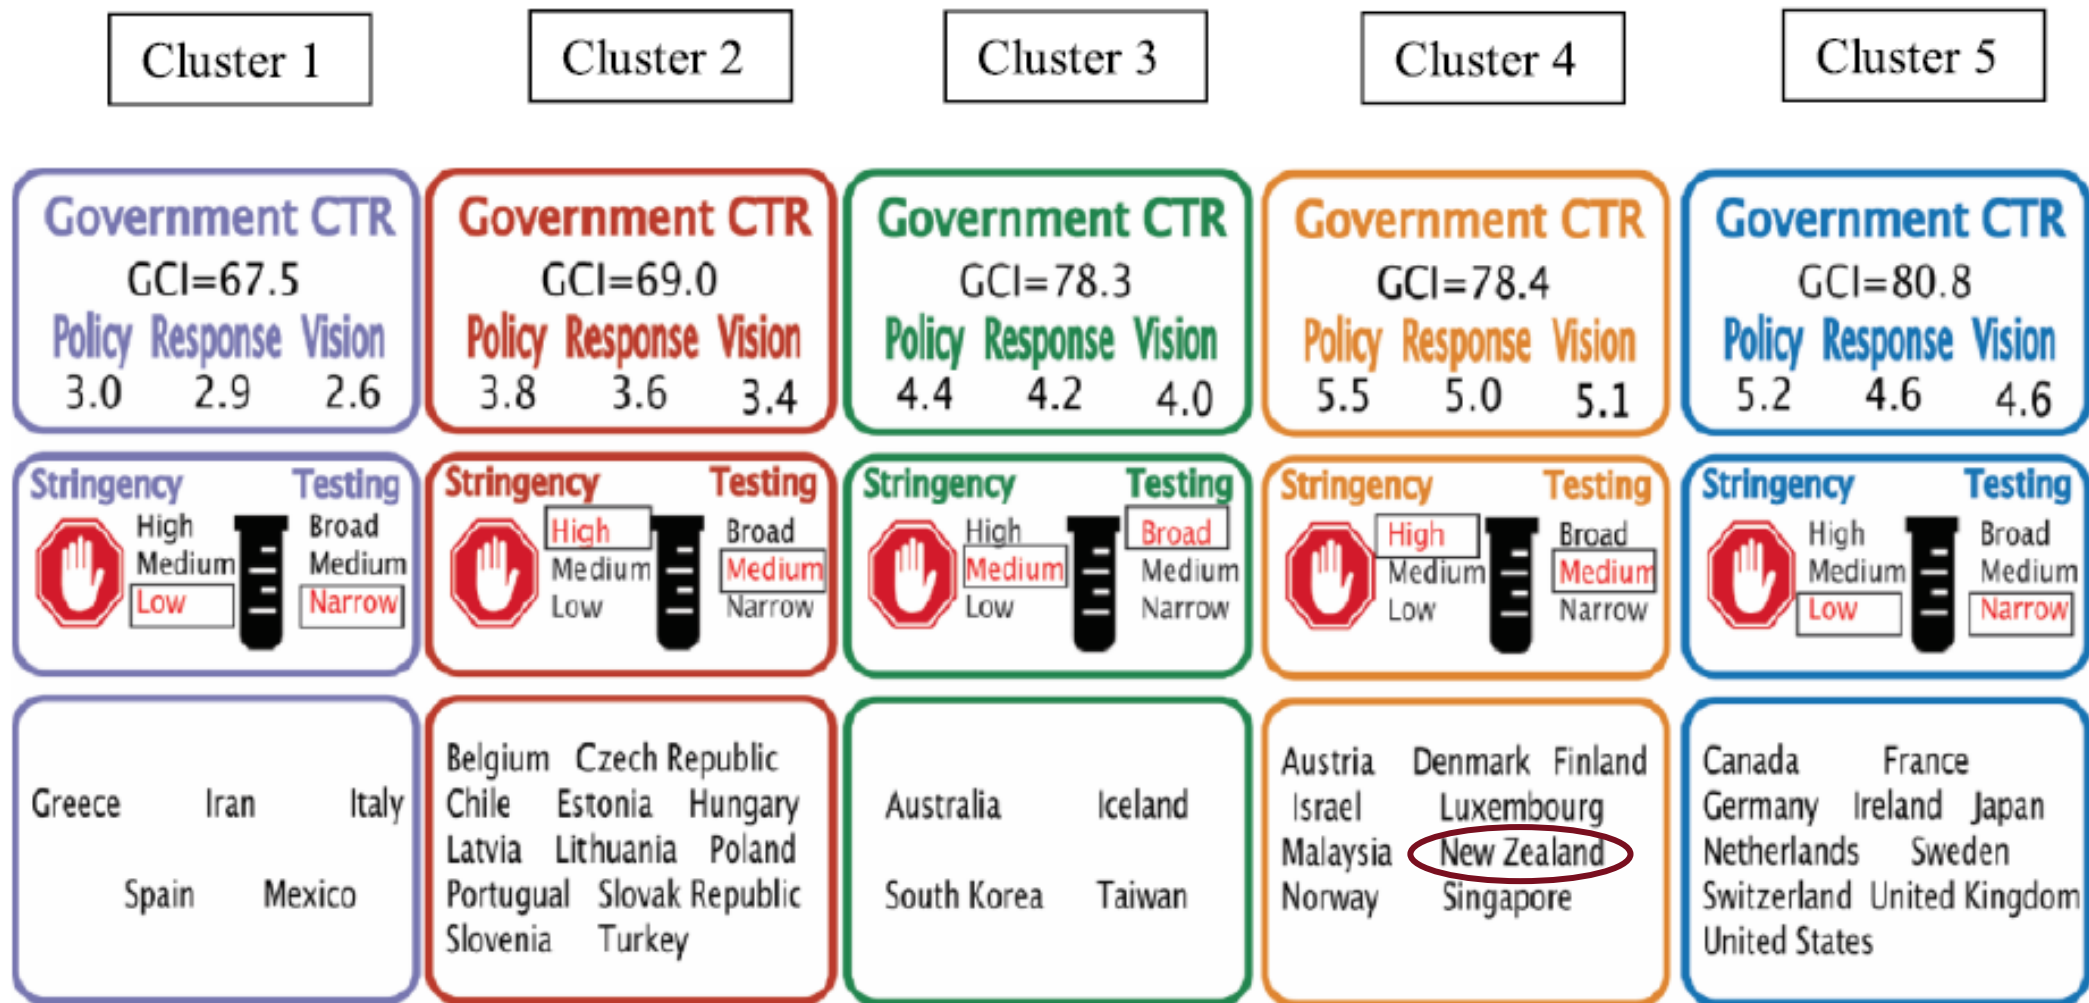

# National Health Systems' Cluster Performance on Capacity to Respond, Stringency of Response, and Approach to Testing

# National Health Systems' Cluster Performance on Capacity to Respond, Stringency of Response, and Approach to Testing

# National Health Systems' Capacity to Respond, Adoption of Early Stringency Measures and Approach to COVID-19 Testing

# Part 2: Against this background, how do we get to 2030?

**A roadmap to the  
future**

# The New Zealand Approach

[1] The Health Charter

**MACQUARIE**  
University

**AUSTRALIAN INSTITUTE

# Te Mauri o Rongo

THE NEW ZEALAND HEALTH CHARTER

# Te Mauri o Rongo – The New Zealand Health Charter

---

MACQUARIE  
University

AUSTRALIAN INSTITUTE  
OF HEALTH INNOVATION

Te Mauri O Rongo is a statement of values, principles, and behaviours that health entities and health workers are expected to demonstrate at a collective, organisational and individual level and ensures that health and care workers are supported and empowered by shared values in workplaces that value their contributions.

# Te Mauri o Rongo – The New Zealand Health Charter

AUSTRALIAN INSTITUTE  
OF HEALTH INNOVATION

## Wairuatanga

Working with heart, the strong sense of purpose and commitment to service that health workers bring to their mahi.

## Rangatiratanga

As organisations we support our people to lead. We will know our people; we will grow those around us and be accountable with them in contributing to Pae Ora for all.

## VALUES AND PRINCIPLES THAT SHAPE OUR BEHAVIOURS

## Whanaungatanga

We are a team, and together a team of teams. Regardless of our role, we work together for a common purpose. We look out for each other and keep each other safe.

“Whiria te tangāta” – we will weave our people together.

## Te Korowai Āhuru

A cloak which seeks to provide safety and comfort to the workforce.

# Te Mauri o Rongo – The New Zealand Health Charter

---

MACQUARIE  
University

AUSTRALIAN INSTITUTE  
OF HEALTH INNOVATION

Te Mauri O Rongo is how [New Zealand] will provide healthcare that is more responsive to the needs of, and accessible to, all people living in Aotearoa New Zealand.

# The New Zealand Approach

## [2] The Health Strategy

# New Zealand Health Strategy 2023

AUSTRALIAN INSTITUTE  
OF HEALTH INNOVATION

New Zealand  
Health  
Strategy  
2023

# New Zealand Health Strategy

## Purpose

The New Zealand Health Strategy sets the medium- and long-term direction for health and identifies priority areas for change to improve health outcomes.

## Our vision

Our long-term vision is to achieve pae ora | healthy futures for all New Zealanders.

## Commitment to Te Tiriti o Waitangi | The Treaty of Waitangi

The health sector is committed to fulfilling the special relationship between Māori and the Crown under Te Tiriti o Waitangi | The Treaty of Waitangi.

The Crown's approach to meeting its obligations under Te Tiriti is outlined in section 6 of the Pae Ora (Healthy Futures) Act 2022. The legislation contains specific provisions intended to give effect to the Crown's obligations. In particular, the health sector's principles in section 7 of the Act guide the Minister of Health, Manatū Hauora | Ministry of Health and health entities in how they carry out their functions. The health sector principles incorporate key outcomes and behaviours derived from the principles of Te Tiriti, as articulated by the courts and the Waitangi Tribunal.

## Relationship to other health strategies

The New Zealand Health Strategy takes a whole-population focus and considers systemic issues, opportunities and priorities. It does this in partnership with Pae Tū | the Hauora Māori Strategy, which provides a framework to guide health entities in upholding Te Tiriti o Waitangi and improving Māori health outcomes. Together, the New Zealand Health Strategy and Pae Tū set the overarching long-term direction for health.

The four population strategies (for Pacific health, health of disabled people, women's health and rural health) set a more focused direction for specific populations.

## The New Zealand Health Strategy - key points

The strategy is **focused on achieving pae ora | healthy futures for all New Zealanders.**

The strategy is **built on our commitment to Te Tiriti o Waitangi.**

The strategy has **two overarching long-term goals:**

- to **achieve health equity** for our diverse communities and especially for Māori, Pacific, disabled and other groups who have poorer outcomes
- to **improve health outcomes** for all New Zealanders.

The strategy has **six strategic priorities** that set a clear direction for the type of change needed in the next 10 years to move towards achieving these goals and ensure that our health system is fairer, stronger, more sustainable and responsive.

The strategy sets **ten-year ambitions** for the changes that are needed in each priority area, to direct efforts on the actions that will have the greatest impact on our goals.

These ambitions require collective action and aim to build alliances across the health system, the wider public sector, the private sector industry and other partners.

Recognising and responding to the voices of our people and communities throughout the health system, so people have greater control over the design of services and decisions made about their care.

### Ten-year ambitions

- People, whānau and communities will have greater control and influence over their health and the services they need.
- People have the best possible experience of health services and the health system.

Supporting the health workforce to develop the diverse, skilled and confident workers for the future.

### Ten-year ambitions

- The workforce will reflect our diverse communities and have the skills and capabilities required to meet their needs.
- The workforce will feel valued, recognised and respected and will be supported and motivated to deliver high-quality care.
- Flexible learning and working environments will give more room for growth and development.

## Our approach to setting priorities

### The strategy balances the different driving forces of change

Achieving and sustaining change to deliver our long-term goals requires coordinated action in different areas.

The strategy seeks to guide a cultural shift to align the motivations and values of a diverse workforce, to rebalance decision making and influence more evenly, and to focus on how relationships and connections inform how people behave.

Our approach to change recognises the driving forces that influence how the system works as a whole and balances a focus on:

- systems, policies and practices that set rules, funding and expectations
- behaviours, relationships and mindsets that inform how people think and act.

### The strategy is based on the evidence and what we have heard from people, whānau and communities

The strategy has been developed based on an understanding of current health outcomes and trends, including inequity between groups, and opportunities for change.

The choice of priorities and ambitions has been informed by the voices of people, whānau and communities and their experiences and aspirations for health and wellbeing.

Developing services that are focused on preventing illness and delivering care closer to home, and support access for most under-served communities

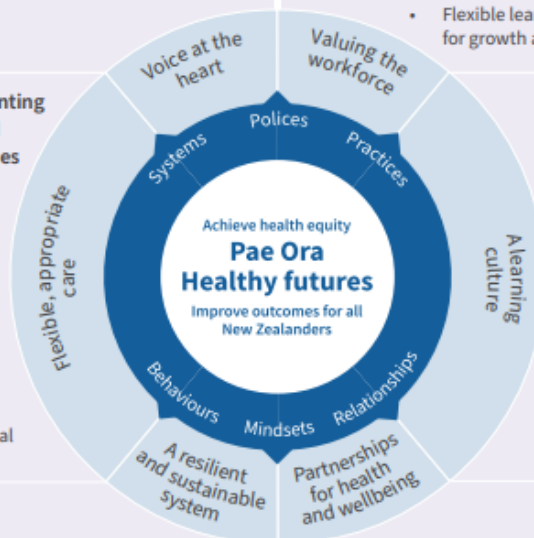

### Ten-year ambitions

- Health services will be flexible to people's range of needs and their cultural expectations.
- People are able to access the care they need, when they need it.
- The health system will make a significant shift in investment towards services that reduce, delay and prevent ill health and prioritise the early years of life.
- The health system will value physical and mental health equality.

Ensuring preparedness for future shocks and the best use of resources to manage the demand for health services and affordability of the system over long term.

### Ten-year ambitions

- The health system will be better prepared to manage future adverse events.
- The health system will be more productive and efficient, to make the best use of public money.

Creating a culture of continuous learning and improvement that supports quality, innovation, research and evaluation.

### Ten-year ambitions

- The health system will develop standards for high-quality care that support all services to improve.
- New initiatives will help all parts of the system to harness innovation and new technologies and put evidence and research into everyday practice.
- New national functions will drive continuous improvement and support the development of new technologies.

Working with the other sectors and across government to partner on actions that address the drivers of health and wellbeing and support healthy communities and environments.

### Ten-year ambitions

- The health system will lead and influence across government to improve health and wellbeing outcomes.
- Health entities will partner with other sectors to support shared approaches to improve health and wellbeing.

Editorial Decision 16 October 2018; Accepted 6 December 2018

### Abstract

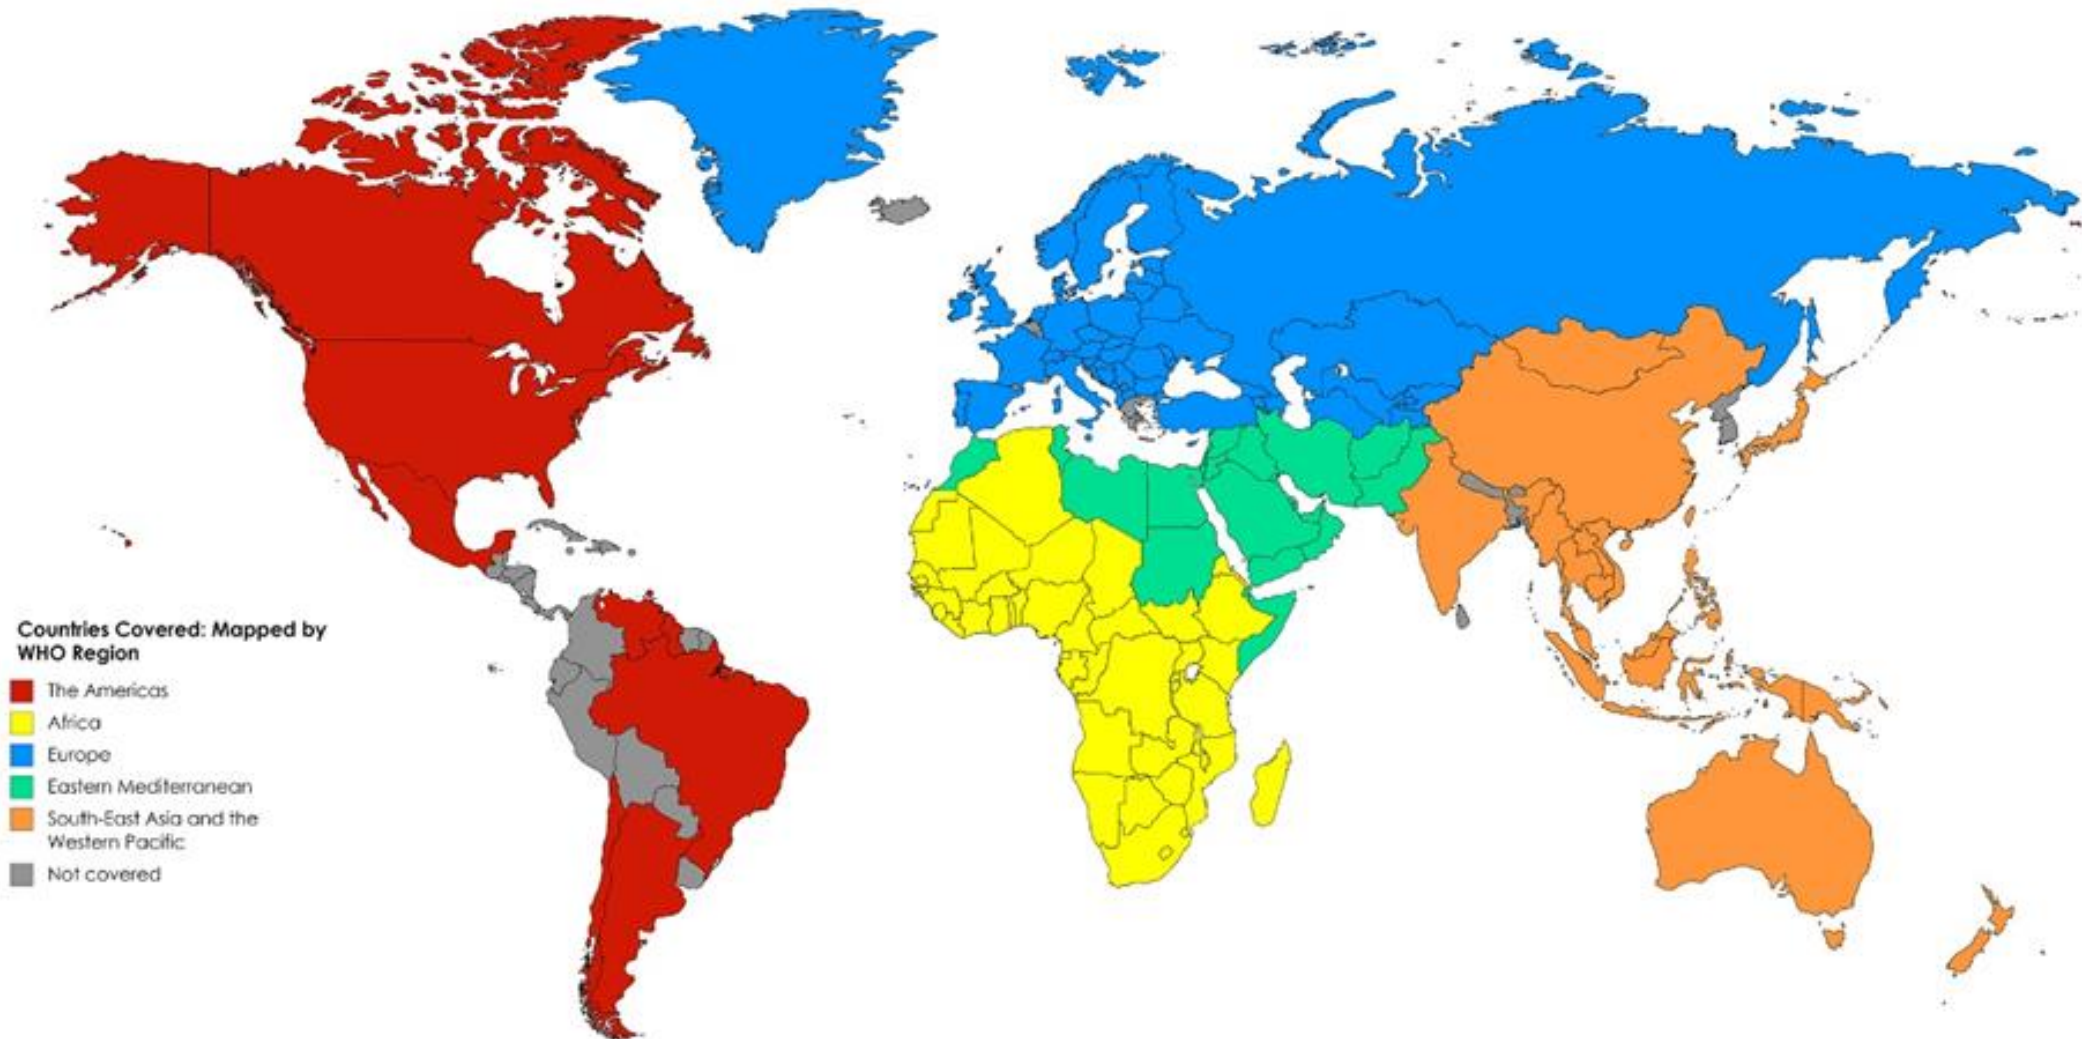

Most research on health systems examines contemporary problems within one, or at most a few, countries. Breaking with this tradition, we present a series of case studies in a book written by key policy-

# Lessons?

---

**What lessons can be  
taken from this global  
outlook on the future?**

# The result:

# Five main trends

---

The trends shaping health systems of the future:

- Sustainable health systems
- The digital health revolution
- Emerging technologies
- Global demographic dynamics
- New models of care

**These are happening now, in any case**

# Nine main initiatives: These are being widely promoted or adopted

1.

Integration  
of  
healthcare  
services

2.

Financing,  
economics  
and  
insurance

3.

Patient-  
based care  
and  
empowering  
the patient

4.

Universal  
healthcare

5.

Technology  
and  
information  
technology

# Nine main initiatives

6.  
Ageing  
populations

7.  
Preventative  
care

8.  
Accreditation,  
standards  
and policy

9.  
Human  
development,  
education  
and training

**How do we get  
to this version  
of 2030?**

**The system as we know it**

**THE ROAD TO 2030**

**The ideal healthcare system of the future**

Fragmented and siloed

**1** INTEGRATED CARE

Cohesive, joined up

Volume-based care

**2** VALUE-FOR-MONEY SERVICES

Value-based care

Provider-oriented

**3** PATIENT-BASED CARE

Person-centred

Barriers to access and affordability

**4** UNIVERSAL COVERAGE

Wide access without financial hardship

Static, legacy-based systems; not data driven

**5** INFORMATION TECHNOLOGY

Machine learning and AI enabled: Data-driven clinical decision making

Unhealthiness amongst the population: Poor health literacy

**6** HEALTHY, HEALTH-LITERATE POPULATIONS

Well-being, healthy ageing and health aware

Focus on acute care

**7** PREVENTATIVE CARE

Shift to primary-orientated, health promoting, preventative care

Entrenched levels of poor quality, unsafe care

**8** HIGH-QUALITY, SAFE, STANDARD-BASED CARE

Less harmful, more effective services

Uneven workforce, training, knowledge and development

**9** WORKFORCE DEVELOPMENT

A fit-for-purpose, highly trained and sustainable workforce

---

# There's many ideas

■ ■ ■

# Part 3: My take on getting to the future

## Eight suggestions

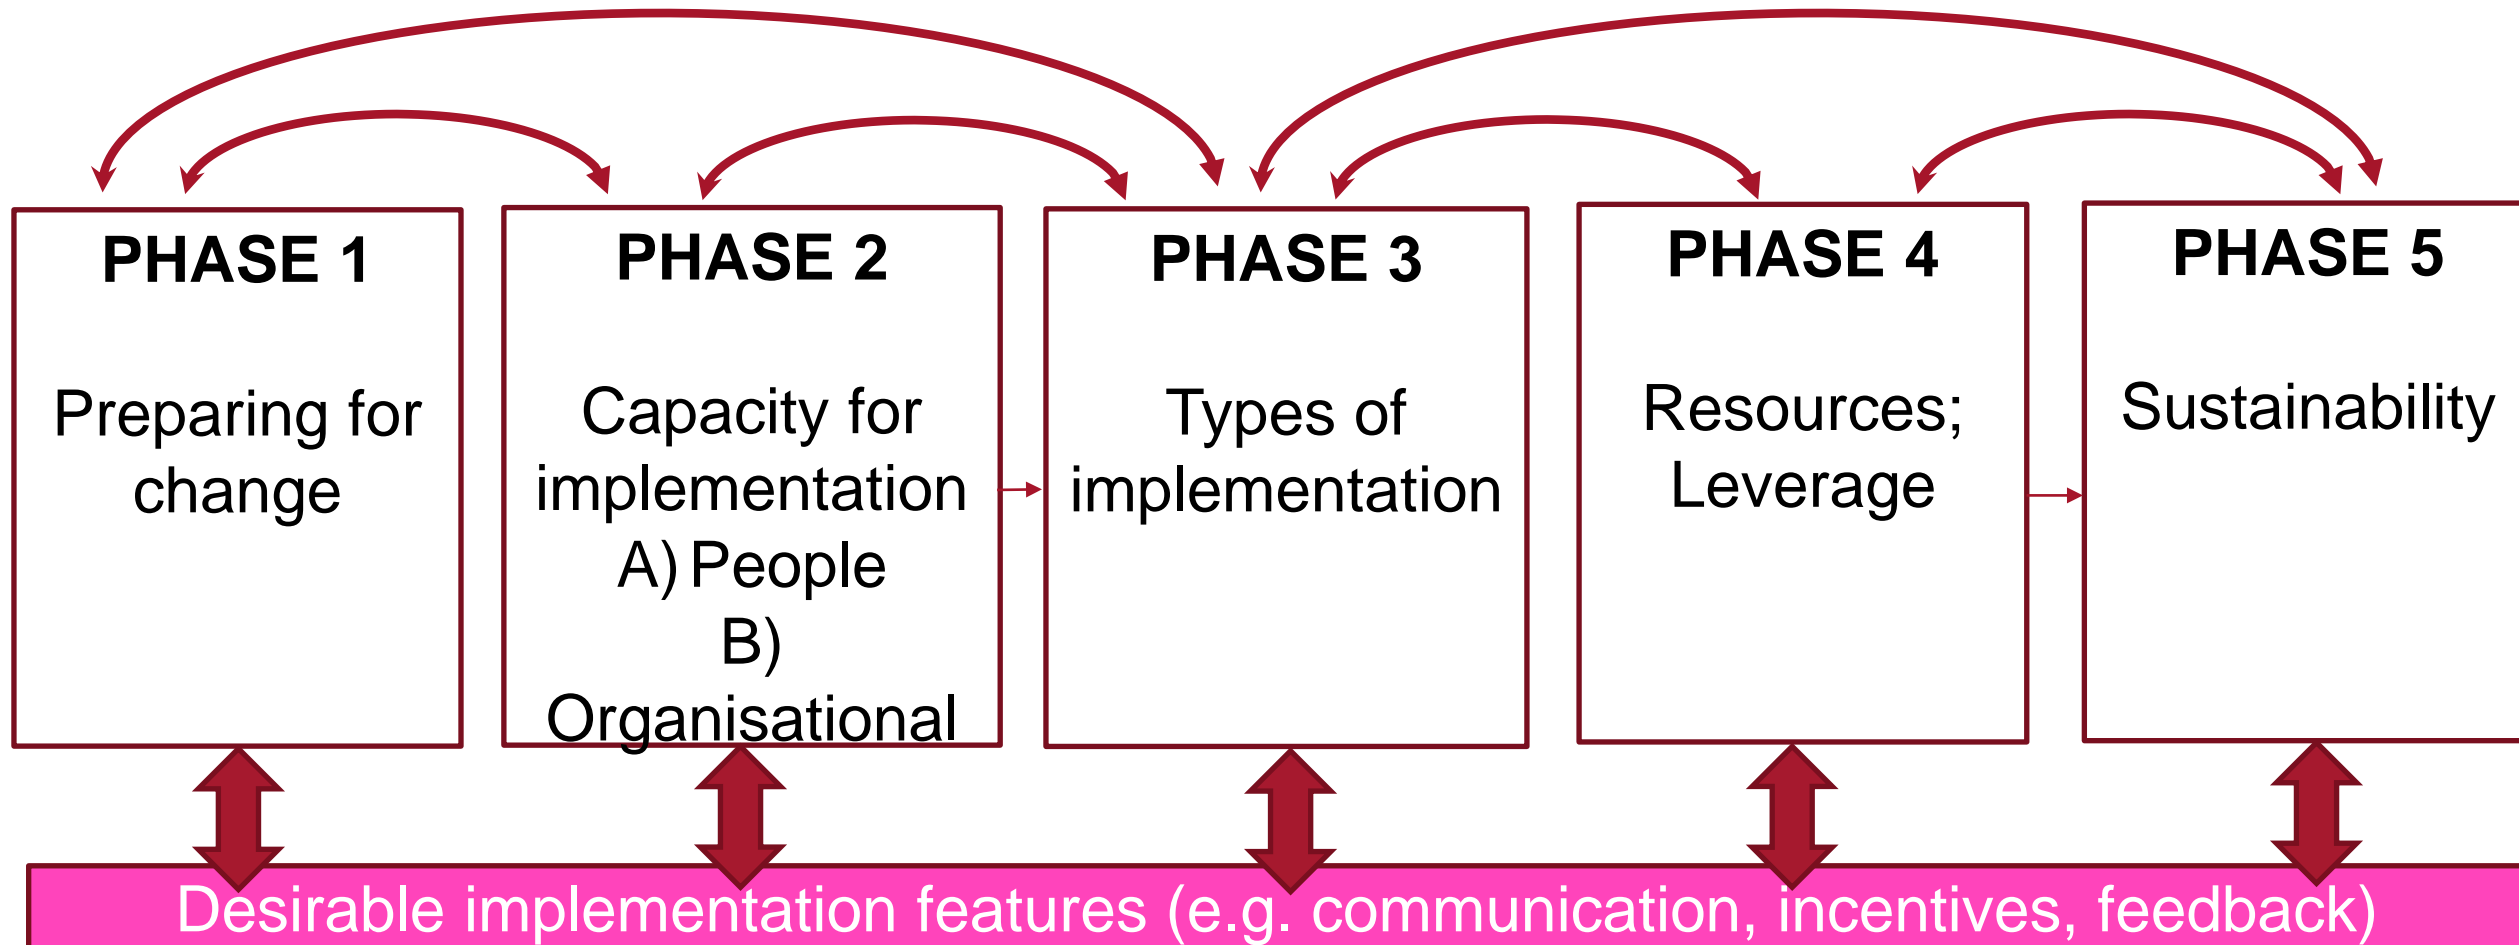

# 1. The inside and outside world— everyone is in their own box

**So get out of  
your box,  
embrace the  
complexity,  
and lead your  
bit of the  
needed  
transformation**

[Virpi/BUSINESSILLUSTRATOR.COM](http://Virpi/BUSINESSILLUSTRATOR.COM)

# 2. Have a plan based on implementation science

[Braithwaite J, Marks D, and Taylor N. (2014) Harnessing implementation science to improve care quality and patient safety: a systematic review of targeted literature. *International Journal for Quality in Health Care*, 26:3]

# 4. Understand deeply that our problems and solutions are not linear

# 5. Focus on the important

# Just three numbers – 60:30:10

[Braithwaite, J., Glasziou, P. & Westbrook, J. The three numbers you need to know about healthcare: the 60-30-10 Challenge. *BMC Med* 18, 102 (2020). <https://doi.org/10.1186/s12916-020-01563-4>]

In 6 out of 10 encounters, patients receive care according to best practice guidelines

In 3 out of 10 encounters, patients receive ineffective or low-value care

In 1 out of 10 encounters, patients are harmed

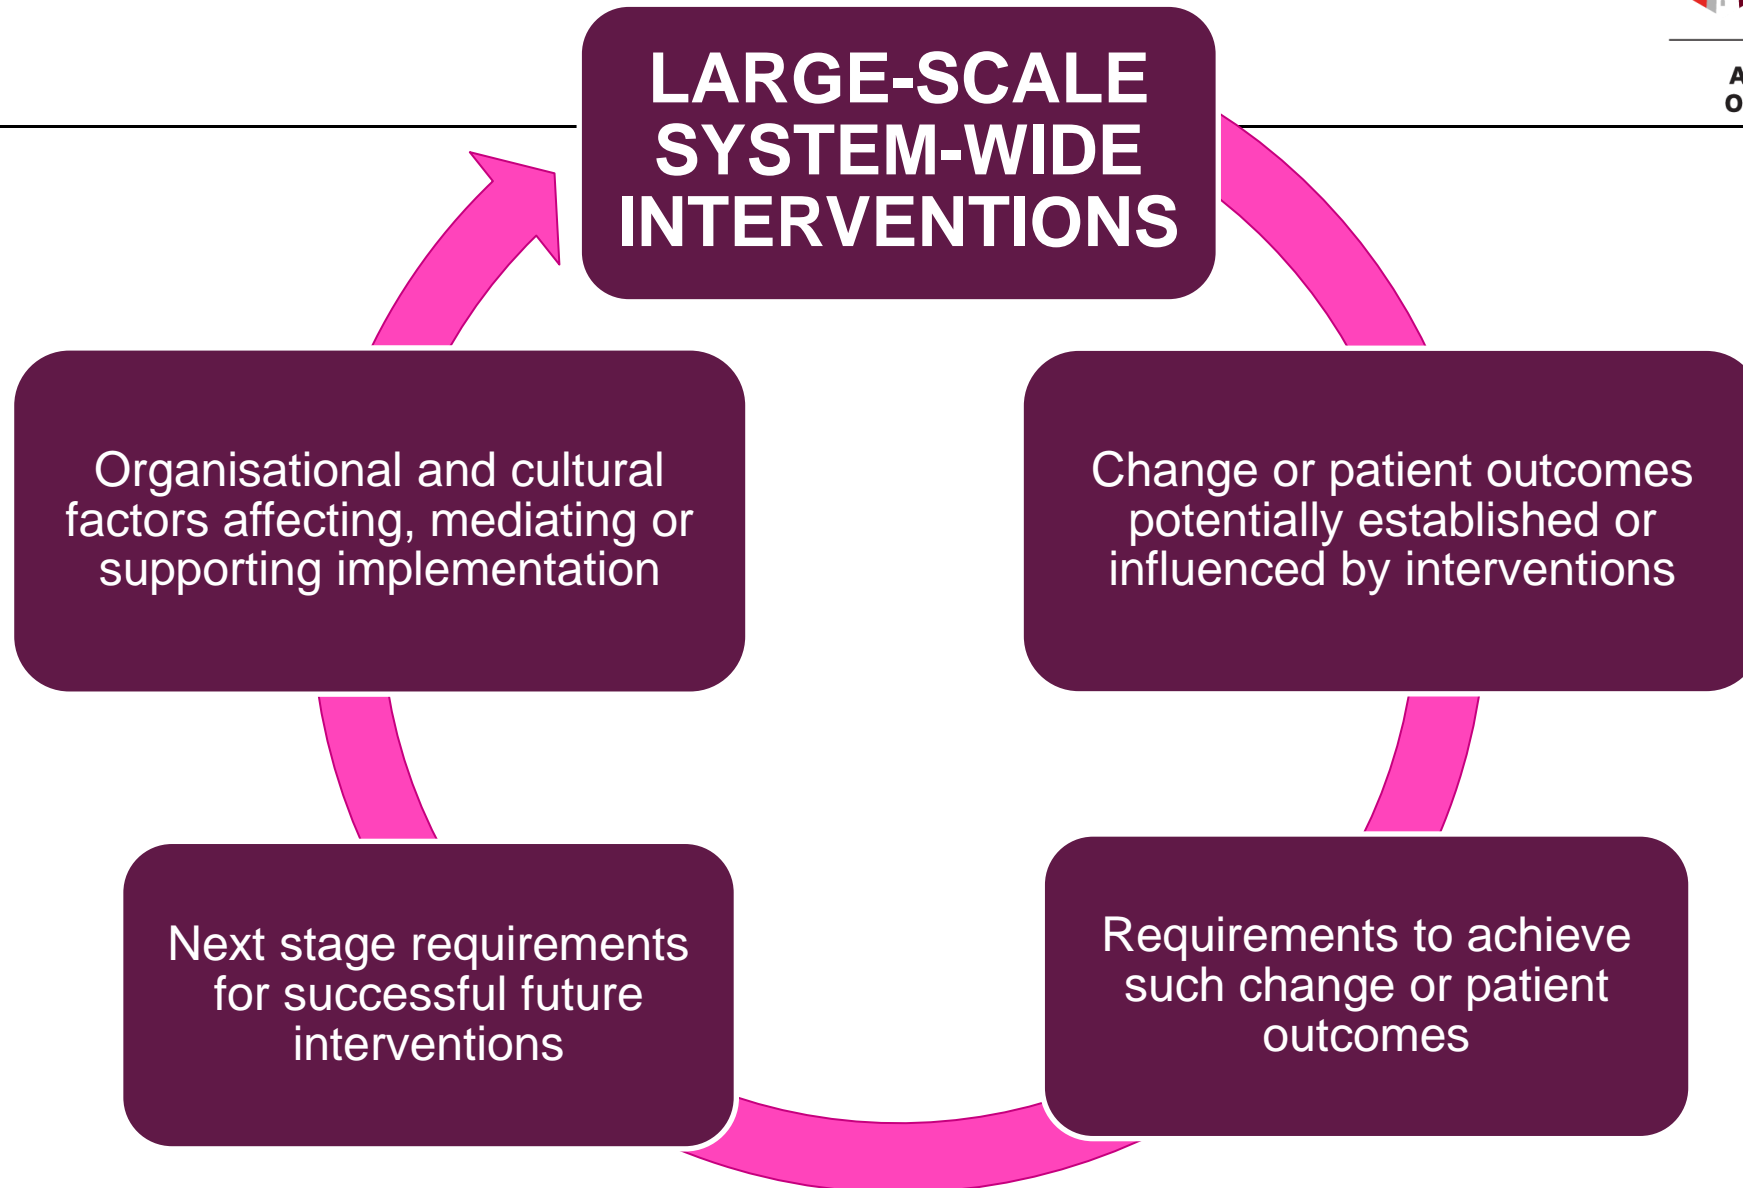

# 6. It's a journey, not a destination

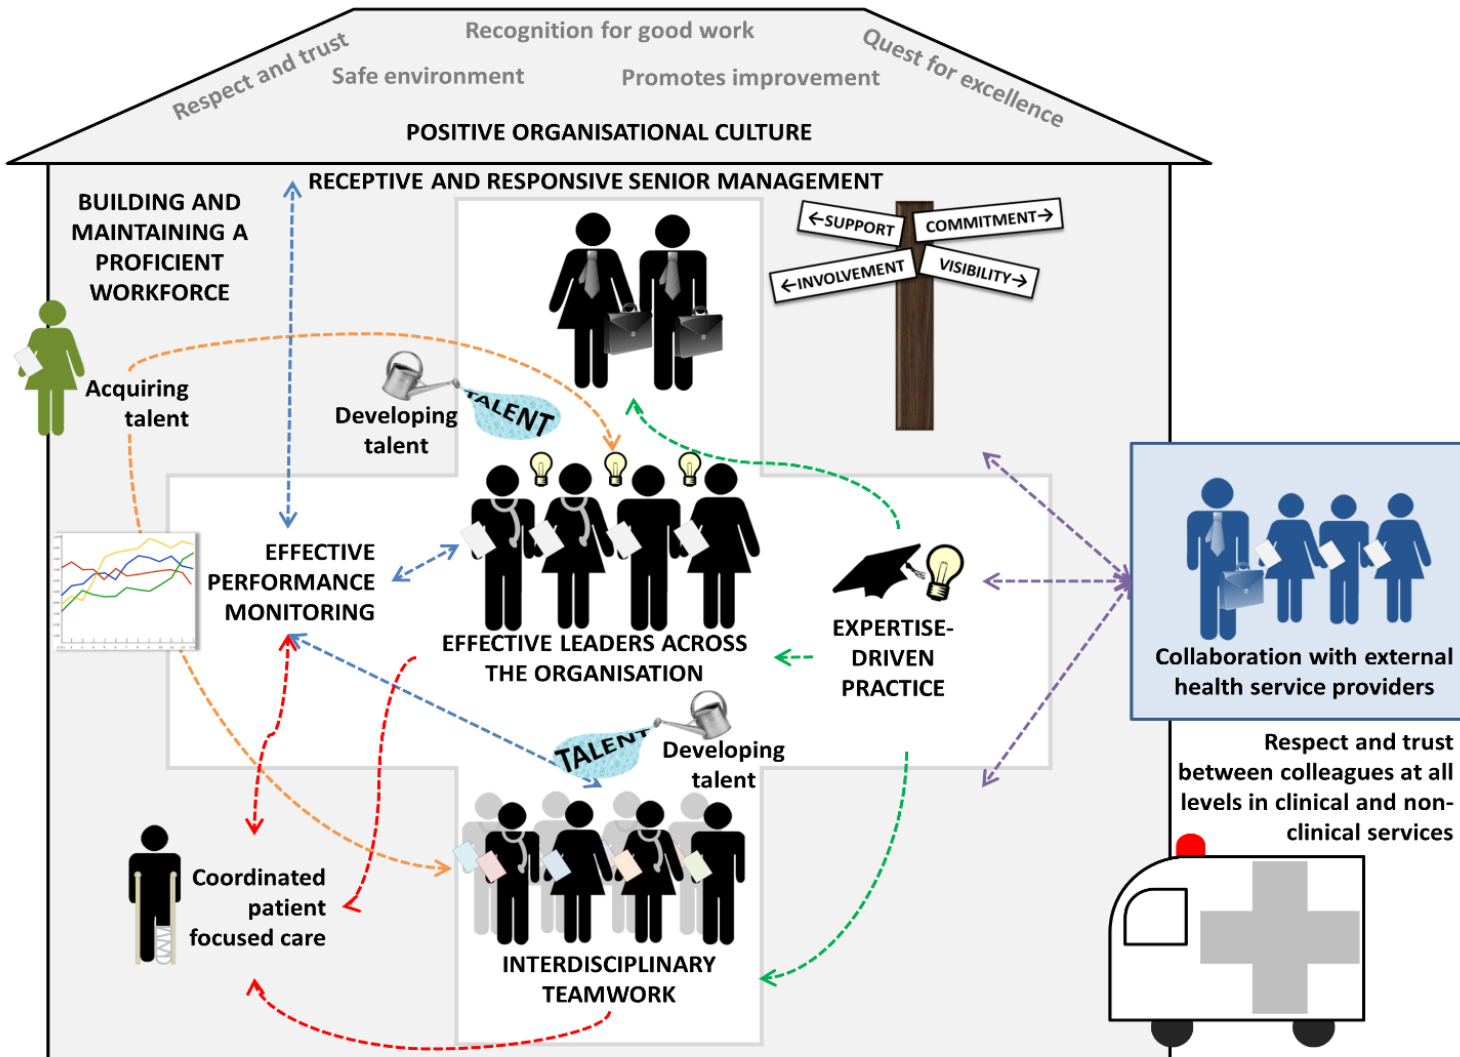

[Adapted from Braithwaite et al. 2014. Harnessing implementation science to improve care quality and patient safety: a systematic review of targeted literature. *Int J Qual Health Car*, Braithwaite et al. 2007. An action research protocol to strengthen system-wide inter-professional learning and practice. *BMC Health Serv Res*]

# 7. Implementation at scale

# 8. High Performing Hospitals

Taylor et al. *BMC Health Services Research* (2015) 15:244

### Abstract

**Background:** High performing hospitals attain excellence across multiple measures of performance and multiple departments. Studying high performing hospitals can be valuable if factors associated with high performance can be identified and applied. Factors leading to high performance are complex and an exclusive quantitative approach may fail to identify richly descriptive or relevant contextual factors. The objective of this study was to undertake a systematic review of qualitative literature to identify methods used to identify high performing hospitals, the factors associated with high performers, and practical strategies for improvement.
