

Results of mental health and addiction staff survey

Ngā Poutama Oranga Hinengaro: Quality in Context

Auckland DHB

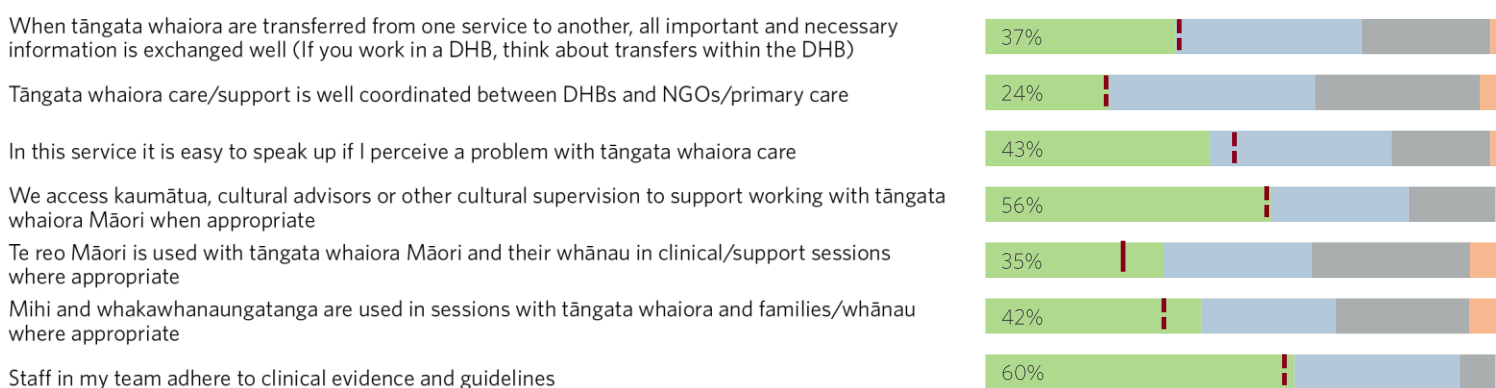

Ngā Poutama Oranga Hinengaro: Quality in Context was a national survey of quality culture in mental health and addiction services. The survey was conducted in August 2018.

Thank you to the over 2,500 people around the country who participated in the survey. Here are the results for your DHB.

Engagement with tāngata whaiora and family/whānau

Care and support provided

Learning and changing the care/support provided

Engaged, effective workforce

■ % Positive
 ■ % Neutral
 ■ % Negative
 ■ % Don't know
 All-DHBs % positive
 — Statistically significant difference
 - - - No evidence of difference

How to use these survey results

These survey results can be used to support quality improvement in your organisation.

We encourage frontline staff to use the results to support quality improvement projects, by:

- displaying the results in staff areas
- talking about the results in team meetings and with colleagues
- using the results to develop change ideas and test changes, as part of the plan-do-study-act cycle.

Key findings for my DHB

Overall, results for MHA staff at Auckland DHB were consistent with combined results across all DHBs. However, staff at this DHB were more likely to agree (ie, to respond positively) that:

- te reo Māori is used with tāngata whaiora Māori and their whānau when appropriate, and
- the service uses data to help monitor and make improvements to the quality of care/support provided.

In words – what would make things better for tāngata whaiora

In words – what currently works well for tāngata whaiora

These word-clouds summarise the key themes from the range of responses around the country. Below are some examples of responses from your DHB:

- 'We need to have more establishments in mental health to provide services to support our Māori and Pacific whānau'
- 'Communication improvement between organisation and middle and upper management responding within a time frame limit heading towards a deadline and a positive outcome'
- 'More availability of staff to cater to the demand, more staff to decrease waiting lists'
- 'Having more time to engage with them'

- 'We have an experienced cohesive team with a vision for the service and who holds the needs of tāngata whaiora foremost in their minds when planning and implementing service delivery. There is a strong sense of empathy and compassion for the needs of tāngata whaiora'
- 'We try to see everyone as they come through the door, and try our best with the limited services we are able to offer'
- 'Having family members stay 24/7 if this is what they want to do. Have a bed and food available for family members to stay to support their loved one'

Questions relating to cultural competency – comparing responses from Māori and non-Māori staff

Questions with the largest difference between inpatient and community staff

* Indicates a statistically significant difference
 Data in these graphs is the percentage of people who gave a positive response
 Comparisons between Māori and non-Māori, and community and inpatient are shown only where there is a minimum of 20 people in each category

Why was the survey conducted?

This survey underpins the national mental health and addiction quality improvement programme, funded by DHBs and coordinated by the Health Quality & Safety Commission.

The survey was run to help identify where knowledge, culture or communication may impact the quality and safety of mental health and addiction services. The survey findings intend to be used to inform local quality improvement initiatives.

The survey was open for the month of August 2018.

The survey was conducted by Mobius Research Ltd on behalf of the Health Quality & Safety Commission.

Where can I find more information?

This report does not present all the information from the survey. There are a range of other reporting resources. You can find all of these resources on the Health Quality & Safety Commission website www.hqsc.govt.nz/our-programmes/mental-health-and-addiction-quality-improvement/projects/quality-in-context

Information not contained in these other resources is available by request. Refer to the above link for contact details.

How many people in my DHB completed the survey?

The results in this document are based on 166 responses from your DHB. This number of responses for your DHB means there is a margin of error of 8 percent for each of the quality and culture survey questions.

Significant differences

Difference between groups (such as Māori compared to non-Māori, or the DHB to the national average) are tested for statistical significance at the 95% confidence level. Statistically significant differences are indicated on the graphs.
