Appendix C: PMMRC Classification of Contributory Factors and Potential Avoidability (2012 version)

Systems review – contributory factors

Contributory factors may be highly specific to the death or generalised to the system(s). Identifying contributory factors that occur and are inherent in the system is an important part of the review. These factors are commonly sub-classified into organisational/management, personnel and those relating to barriers to access and/or engagement in care.

Please read options below and select if any of the following were present

Have any organisational and/or management factors been identified? Yes No

(eg, inadequate supervision of staff, lack of appropriate clinical management protocols or guidelines, lack of communication between services)

If 'yes' please classify – select ALL relevant:

- Poor organisational arrangements of staff
- Inadequate education and training
- Lack of policies, protocols or guidelines
- Inadequate numbers of staff
- Poor access to senior clinical staff
- Failure or delay in emergency response
- Delay in procedure (eg, caesarean section)
- Delayed access to test results or inaccurate results
- Equipment (eg, faulty equipment, inadequate maintenance, quality of or lack of equipment)
- Building and design functionality (eg, space, privacy, ease of access, lighting, noise, power failure, operating theatre in distant location)

Other – if other please state or provide any comments:

Have factors relating to personnel been identified?
(eg, staff factors relating to professional care and service provision)

Yes No

If 'yes' please classify – select ALL relevant:

- Knowledge and skills of staff were lacking
- Delayed emergency response by staff
- Failure to maintain competence
- Communication between staff was inadequate
- Failure to seek help/supervision
- Failure to follow recommended best practice
- Lack of recognition of complexity or seriousness of condition by caregiver

Other – if other please state or provide any comments:

Have barriers to access and/or engagement with care been identified?
(eg, no, infrequent or late booking for antenatal care, woman declined treatment/advice)

Yes No

If 'yes' please classify – select ALL relevant:

- No antenatal care
- Infrequent care or late booking
- Declined treatment or advice
- Obesity impacted on delivery of optimal care (eg, ultrasound scan)
- Substance use
- Family violence
- Lack of recognition by the woman or family of the complexity or seriousness of condition
- Maternal mental illness
- Cultural barriers
- Language barriers
- Not eligible to access free care
- Environment (eg, isolated, long transfer, weather prevented transport)

Other – if other, please state or provide any comments:

Was this death potentially avoidable?

Yes No

Complete this after considering the selected contributory factors above.

If 'yes', the absence of which contributory factor(s) might have meant the death was avoidable?
